

REMARKS

The claim has been amended to call for a torsion spring having a coiled portion and a straight arm. In addition, it is recited in the claim that the straight arm makes sliding contact.

The cited reference to Johnson does not include this type of torsion spring and, particularly, does not include an arm extending along the length of the housing coupled to a coiled portion or an arm that makes sliding contact with the housing. In fact, nothing makes such sliding contact with the housing in Johnson.

Therefore, reconsideration is respectfully requested.

Respectfully submitted,
